DIABETES 360 RELEASED EXCLUSIVELY FOR THE IPHONE

Jacksonville, Florida, November 18, 2011: Diabetes 360 : The most functionality for the price on the App Store! Total Diabetes Management including insulin dose calculation, glucose level tracking, carbohydrate intake with searchable database, reminders, and much more.

Based on input from medical professionals and diabetic patients, Diabetes 360 is built with the patient's needs in mind. The makers of Diabetes 360 have refined the task of calculating insulin dosage, logging, and blood glucose management. This is the essence of this amazingly simple to use iPhone App.

Insulin dosing is computed based on glucose level as well as total carbohydrate. The carbohydrate database from the US Department of Agriculture is on the iOS device (iPhone, iPod, iPad) so it can be accessed quickly and when there is no network service available. The foods selected are seamlessly brought into the log and included in the dose calculation. Insulin On Board and Exercise are accounted for in the dose calculation as well.

There is a simple but comprehensive reminder system built into the app for Pump Site Changes, Daily Schedule (breakfast, snacks, etc), Ketone levels, and long-acting insulin dosing.

Log entries can be graphed and exported via email to your doctor or imported as CSV files into a spreadsheet. They are also shareable on all of your Apple mobile devices.

Diabetes 360 IS the most comprehensive, cost-effective, and user-friendly solution for daily diabetes management available today.

And if you've been waiting for a reason to buy a iPhone or iPod, this is it!!!

Visit: <http://diabetes360.deepbluwebtech.com> for a complete tour of the app.
